FORWARD

This report is structured across three separate sections. In the results of the findings of the survey of Service Providers in Cork are found in Chapter 1 of this document. This incorporates the main findings of 20 formal and a number of informal interviews. The second chapter documents the findings of 13 interviews and one focus group administered to homeless in the Cork region. The third chapter likewise reports the findings of 13 interviews with people classified or who classify themselves as being members of ethnic minority groups. This section also includes the findings of two focus groups that were administered to Travellers and asylum seekers in County Cork.

The results have been structured in such a manner to make them compatible to the interview schedules provided to NASC and thus allow for an easy synthesis. The findings are often documented directly as recorded from the respondents in order to create an intimate setting between the reader and those who made the comments.

We trust that this document meets with the requirements of the brief.
